

In the Claims

Please amend the claims as indicated below:

Claim 1 (currently amended): A method of filtering one or more events associated with one or more computer environments for display in a performance monitoring system, wherein each of the one or more events is generated when a threshold associated with a first parameter is met, the method comprising the steps of:

receiving a filter representing at least one of: a set of the one or more computer environments or at least one second parameter; and

in response to the receiving step, filtering the one or more events;

displaying the filtered one or more events; and

displaying a link from a first set of information related to the filtered one or more events being displayed, said link for accessing a second set of information related to the first set of information.

wherein the filter is received from, and the one or more filtered events are displayed on, a single display window.

Claim 2 (canceled)

Claim 3 (canceled)

Claim 4 (currently amended): A method as claimed in claim 2 1, wherein for each of the filtered one or more events, the displaying step further comprises the step of displaying a first set

of information associated with: an event identifier; the associated one or more computer environments; the first parameter; the second parameter, and a second parameter identifier.

Claim 5 (original): A method as claimed in claim 4, wherein the first set of information is associated with a second set of information.

Claim 6 (original): A method as claimed in claim 5, wherein the second set of information comprises information associated with the configuration of the one or more computer environments.

Claim 7 (original): A method as claimed in claim 5, wherein the second set of information comprises information associated with the threshold.

Claim 8 (original): A method as claimed in claim 1, wherein the first parameter represents a severity level.

Claim 9 (original): A method as claimed in claim 1, wherein the second parameter represents a resource.

Claim 10 (original): A method as claimed in claim 1, wherein the second parameter represents a time.

Claim 11 (original): A method as claimed in claim 1, wherein each of the one or more computer environments comprises at least one computer system.

Claim 12 (currently amended): An apparatus for filtering one or more events associated with one or more computer environments for display in a performance monitoring system, wherein each of the one or more events is generated when a threshold associated with a first parameter is met, the apparatus comprising:

means for receiving a filter representing at least one of: a set of the one or more computer environments or at least one second parameter; and

means, responsive to the receiving means, for filtering the one or more events,

means for displaying the filtered one or more events; and

means for displaying a link from a first set of information related to the filtered one or more events being displayed, said link for accessing a second set of information related to the first set of information;

wherein the filter is received from and the one or more filtered events are displayed on a single display window.

Claim 13 (canceled)
